

**In the Claims:**

This listing of claims replaces all prior versions and listings of claims:

1. (Currently amended) A print terminal comprising:

an image-capturing unit for receiving image data and outputting captured image data;

a display unit ~~configured to display~~ that displays a print-medium image and a print image superimposed on a rectangular frame representing an outline of a sheet serving as a print medium, wherein said print image ~~is created by~~ results from rotating the captured image data by a selected rotation angle, said rotation angle being selectable within a range of one to ninety degrees; and

~~an image-processing unit configured to control, in response to a user input, an orientation of the print medium relative to the print image, said image-processing unit operable to perform~~ capable of performing any combination of (i) rotating the print-medium image, (ii) rotating the print image, and (iii) simultaneously rotating both the print image and the print-medium image wherein said image-processing unit rotates, in response to a user input, an orientation of the print medium relative to the print image by the selected rotation angle.

2. (Canceled)

3. (Previously presented) The print terminal according to claim 1, wherein rotating the captured image data by a rotation angle less than ninety degrees corrects a tilt of the captured image data.

4. (Previously presented) The print terminal according to claim 1, further comprising a reader for reading the image data from a recording medium, wherein the image-capturing unit receives image data read by the reader.

5. (Currently amended) A print system comprising:

a print terminal comprising:

an image-capturing unit for receiving image data and outputting captured image

data;

a display unit ~~configured to display~~ that displays a print-medium image and a print image superimposed on a rectangular frame representing an outline of a sheet serving as a print medium, wherein said print image ~~is created by~~ results from rotating the captured image data by a selected rotation angle, said rotation angle being selectable within a range of one to ninety degrees; and

~~an image-processing unit configured to control, in response to a user input, an orientation of the print medium relative to the print image, said image processing unit operable to perform~~ capable of performing any combination of (i) rotating the print-medium image, (ii) rotating the print image, and (iii) simultaneously rotating both the print image and the print-medium image wherein said image-processing unit rotates, in response to a user input, an orientation of the print medium relative to the print image by the selected rotation angle; and

a printer for printing the print image on the print medium.

6. (Canceled)

7. (Currently amended) A computer-readable storage medium storing a program, the program comprising the steps of:

displaying a print-medium image and a print image on a display unit, whereby said print-medium image and said print image are displayed superimposed on a rectangular frame representing an outline of a sheet serving as a print medium, wherein said print image ~~is created by~~ results from rotating captured image data by a selected rotation angle, said rotation angle being selectable within a range of one to ninety degrees;

~~controlling, in response to a user input, with an image-processing unit, an orientation of the print medium relative to the print image using an image processing unit, said image-processing unit operable to perform~~ capable of performing any combination of (i) rotating the print-medium image, (ii) rotating the print image, and (iii) simultaneously rotating both the print image and the print-medium image wherein said image-processing unit rotates, in response to a

user input, said orientation of the print medium relative to the print image by the selected rotation angle; and

displaying on the display unit a print preview of said print-medium image and the print image resulting from said controlling step.

8. (Canceled)

9. (Canceled)
